The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all. No one should be able to rule a state with uneducated opinion. This is why we go to licensed medical professionals for our medical care, not politicians.

Sincerely,
Kristen McElveen

Dear Florida Board of Medicine,

Ihre Nachricht Ich schreibe Ihnen heute, um Sie aufzufordern, die vorgeschlagenen Leitlinien des Gesundheitsministeriums von Surgeon General Ladapo zur Gender-Dysphorie bei Kindern und Jugendlichen abzulehnen. Die vom Gesundheitsministerium herausgegebenen Leitlinien und die von diesem Gremium verwendeten Studien sind bemerkenswert ungenau und gefährlich. Als Ärzte – es liegt in Ihrer Verantwortung, keinen Schaden anzurichten. Als Regierungsbeamter liegt es in Ihrer Verantwortung, wahrheitsgemäße Informationen bereitzustellen, um eine besser informierte Bevölkerung zu schaffen. Es gibt zahlreiche Peer-Review-Artikel, die politisch und religiös motivierte wissenschaftliche Publikationen, die im Bericht des Boards über geschlechtsspezifische Pflege enthalten sind, leicht entlarven. Leider sind diese Leitlinien und die Rosinenpickerei-Studien dieses Gremiums nichts anderes als Anti-Transgender-Propaganda. Die führenden Gesundheitsorganisationen des Landes unterstützen die geschlechtsspezifische Versorgung von Transgender- und gender-nonkonformen Menschen - einschließlich der American Academy of Pediatrics; die American Medical Association; Das American College of Obstetricians and Gynecologists; Das American College of Physicians; Die American Psychiatric Association; Die American Psychological Association; Die American Academy of Family Physicians; Die Endokrine Gesellschaft; Die Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; Nationaler Verband der Sozialarbeiter; Weltärzteverband; und die World Professional Association for Transgender Health, unter anderem. Es gibt in der Tat überwältigende Beweise für die positiven Auswirkungen der geschlechtsspezifischen medizinischen Versorgung von Trans-Jugendlichen auf die psychische Gesundheit - einschließlich einiger der vom DOH und dem Board of Medicine zitierten Studien. Das Verbot des sozialen Übergangs ist ein klarer Eingriff der Regierung in die persönliche und elterliche Entscheidungsfindung. Zahlreiche Studien haben ergeben, dass Transgender-Jugendliche nach dem sozialen Übergang ein ähnliches psychisches Gesundheitsniveau wie die allgemeine Jugendbevölkerung aufweisen, wodurch die typischerweise auftretenden psychischen Ungleichheiten beseitigt werden. Wenn Transgender-Jugendliche von Menschen um sie herum bestätigt werden, sinken die gemeldeten Raten von Depressionen und Suizidalität signifikant. Diese Regel wird ihnen diese lebensrettende Behandlung verweigern. Ich fordere diesen Vorstand auf, wahrheitsgemäße Informationen auf der Grundlage von Wissenschaft und Daten bereitzustellen, im Gegensatz zu falschen Aussagen, die auf Vorurteilen und politischen Agenden basieren. Die Wahrheit ist immer noch wichtig und die Beweise sind klar: Transgender-Jugendlichen die Fähigkeit zum Übergang zu verweigern, ist gefährlich, missbräuchlich und lebensbedrohlich. Bitte lehnen Sie diesen Vorschlag ab und halten Sie Florida für alle sicher.

Sincerely,
Herbert Scholle

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Troy Ferrill-Espin

When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Lois Behr

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Allison Hancock

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Patrick Kimball

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Samantha Garcia

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Dear Florida Board of Medicine,

I am writing to you as a near-lifelong Floridian (recently moved away to Arizona), concerned citizen, and responsible adult (defined here as "adult who does not viciously attack children for political gain") to ask you to please immediately reject the dangerous, dehumanizing, and scientifically nonsensical proposed "guidance" by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents!

Gender-affirming healthcare - including puberty-blocking medication - is often lifesaving for transgender children, who, when they are deprived of proper medical care and societal support, are at much greater risk of suicide (and homicide, for that matter) than cisgender children. Mr. Lapado's proposed "guidance" to deprive trans children of vital gender-affirming healthcare has absolutely no basis in science, nor in any honest concern for the welfare of Florida's children; instead, the "guidance" cites discredited and cherry-picked studies, ignoring the wide body of peer-reviewed evidence and myriad medical associations (listed below) which support the safety and necessity of gender-affirming healthcare, and the only apparent motivations behind the proposed "guidance" are political gamesmanship and vile malice against Florida's trans children, who are currently the targets of a bigoted and thoroughly one-sided war being waged against them by many of Florida's elected officials.

Here's a partial list of the medical organizations which support the need for and medical safety of gender-affirming healthcare for people of *all* ages, children most definitely included:

- American Academy of Pediatrics
- American Medical Association
- American College of Obstetricians and Gynecologists
- American College of Physicians
- American Psychiatric Association
- American Psychological Association
- American Academy of Family Physicians
- Endocrine Society
- Pediatric Endocrine Society
- American Nurses Association
- American Public Health Association
- American Heart Association
- National Association of Social Workers
- World Medical Association
- World Professional Association for Transgender Health.

This is your choice - you can swallow the lethal proposed "guidance" from Mr. Lapado, becoming a weapon in certain politicians' war on Florida's transgender children, and know that some children will suffer and very likely die by suicide as a direct result of your actions; or you can fulfill your fundamental medical duty to protect all patients' health and stand alongside the most respected organizations in your field by rejecting this child-attacking "guidance." Please choose the latter option. The health, happiness, and survival of Florida's children depend on their access to *all* of the medical care that they need, and for many children, that includes gender-affirming care.

Sincerely,
Kathryn Dorn

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Jenna Kunz

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Wingate Steitz

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

As pastor of a mostly LGBTQ+ congregation, I know firsthand the damage that is done to transgender youth when they cannot receive proper medical care. I also know the culture of fear and isolation that is being created by the DeSantis administration's senseless attacks on transgender people.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Marie Alford-Harkey

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
MARIA MANDRY

As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Thank you For listening

Sincerely,
Olivia Brake

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Kristin Hoyer

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Jayme Calhoun

Dear Florida Board of Medicine,

I urge you to reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Karen McClain

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Abigail Laffitte

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Kevin Lindemann

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Dear Florida Board of Medicine,

It was 1963 when I needed transgender care and help. Now at age 67 I am transitioning to be the best version of myself in spite of the misplaced hate and discrimination proposals like these encourage. Please don't try to dictate our life's !

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Felicity Hohenshelt

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Ian Vargas

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Abby Derby

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Deanna Knickerbocker

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Grady Parrott

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Dear Florida Board of Medicine,

What you do as physicians and government officials should protect the health of Floridians. However, this proposed guidance is not meant to protect the health of transgender youths or anyone in Florida but rather to fuel DeSantis's political ambitions. His administration is trying to score political points with primary Republican voters who hate the very existence of transgender people because they complicate their worldviews. First, they banned transgender youths from competing in sports that matched their gender identities. Then, they passed the "Don't Say Gay" law to discourage discussion of LGBTQ people in schools. Surely you can see that this is a pattern of blatantly anti-LGBTQ attacks.

Anyone who has ever known a transgender person knows that their identities are not by any means superficial or temporary, and transgender children are highly unlikely to "grow out of" gender dysphoria if they are not allowed to transition. Most of my transgender friends, in fact, reported that their gender dysphoria got worse as they hit puberty and went through traumatizing changes in their bodies. Some spent their teenage years seriously considering suicide. I have never met a transgender person who said that they regretted transitioning, which is the supposed concern behind attempts to ban gender-affirming care. Accessing gender-affirming care is already a lengthy process for minors that involves parents, children, doctors, and therapists working together. If gender-affirming care is banned or even made harder to access in Florida, then transgender Floridian youths will suffer lifelong negative consequences from allowing their bodies to take on distressing changes during puberty, and sadly, some will not even survive to adulthood.

If you truly care about health in Florida, you will ignore the Department of Health's politically-motivated report and reject guidance that would harm and stigmatize vulnerable transgender youths. Please show courage and protect transgender people.

Sincerely,
Sophia Stanzo

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

As the mother of two transgender children, I can assure you from personal experience that without gender affirming care (medically and socially transitioning), my children would not have survived their childhoods. If you pass this legislation, the effect, intended or not, is that children across our state will end their lives by suicide - not being allowed to just be themselves. You will have their blood on your hands.

By legislating against the LGBTQ community, you will not erase them, you cannot "legislate the gay away." LGBTQ people exist whether you like it or not - and the majority of Americans support their right to exist and have rights. If you support this hateful and dangerous legislation, you will be on the wrong side of history, and the people WILL vote you out.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians - it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Martin Horwitz

Dear Florida Board of Medicine,

I demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Myron Mohr PhD

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Julia Deters

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed patient care.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Karen Stanford

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Charles Happel

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Greg Brown

Dear Florida Board of Medicine,

This may be a bit boilerplate and I'm sure you'll be seeing several identical or nearly identical messages from people like me all over the state. The below statements can be summed up to say: the government should not dictate how families choose what medical treatments are right for them. To remove options is to remove rights. Regardless of all the correct information provided below, America was founded on the principle of representation in direct opposition to a government which gave its people no choice. America is about having choices and making your own choices. Government should remain small and not interfere with those choices except in the case of national security. I have a difficult time believing trans people are a threat to National security.

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,

Jaime Gummere

Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Tricia Pockey

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

As an RN and a parent I have first hand experience with multiple trans kids and allowing them to transition socially makes a huge impact on their self esteem and mental well being. It's easy to see how much more comfortable they are in their own skin with just a few changes to their pronouns and appearance. Transitioning medically with the use of HRT and puberty blockers is also low risk, especially when you take into account the greatly increased risk of self harm and suicide among trans kids who are not accepted and supported.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

I also suggest that in order to make informed decisions on these issues one should have first hand experience, so my recommendation is that each and every member of this board go to a center like Also Youth in Sarasota and volunteer. See the people that your decision would impact and observe the importance that the freedom to transition

into who they are provides.

Sincerely,
Amelia Lynch

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians, it is your responsibility to do no harm. As government officials, it is your responsibility to provide truthful information to create a more informed population.

There are numerous peer-reviewed articles that easily debunk the politically and religiously motivated academic publications found in the Board's report on gender-affirming care: a report that consists of guidance founded on the misrepresentation of legitimate studies and, more maliciously, the cherry-picking of studies based in anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people, including—but not limited to—the American Academy of Pediatrics, the American Medical Association, The American College of Obstetricians and Gynecologists, The American College of Physicians, The American Psychiatric Association, The American Psychological Association, The American Academy of Family Physicians, The Endocrine Society, The Pediatric Endocrine Society, American Nurses Association, American Public Health Association, American Heart Association, National Association of Social Workers, World Medical Association, and The World Professional Association for Transgender Health.

There is OVERWHELMING evidence to support the positive mental health impacts of gender-affirming medical care for trans youth, some of which appears in the very studies cited by the DOH and Board of Medicine.

You NEED to understand: On top of their empirical benefit when medically indicated for a particular patient, puberty blockers ARE the neutral option that allows youth to avoid permanent bodily changes until they're old enough to decide which puberty they should undergo. Banning puberty blockers for gender-affirming care is NOT a moderate decision. Removing the option to delay puberty ensures that trans youth will be forced to undergo permanent changes from their endogenous hormones. Not only is this devastating for their mental health, but it causes longterm issues for surgery outcomes & the ability to "pass" as their gender, opening them up to harassment and the threat of violence. Denying trans youth & their doctors the ability to determine which direction is best for their psyche and health is a flagrant human rights violation.

Moreover, prohibiting SOCIAL transition—which solely consists of youth having the choice of what clothing to wear and what pronouns/name/haircut they would like to have—is clear government intrusion on personal and parental decision making. There is nothing medical about this proposed rule. It is merely treating trans youth as a subordinate class of people, subject to more government control over choices as small as what clothes they are permitted to wear. If this is not transparently horrifying to you, I don't know what to say.

Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When trans youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this

life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please, I am begging you to reject this proposal and keep Florida safe for ALL.

Sincerely,

Ezra Wilson

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
James Webster

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Emily Schanker
209 Jackson Loop Deland, FL 32724-3253

As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Ginnie Preuss

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Dear Florida Board of Medicine,

I demand that you reject the proposed "guidance" by Surgeon General Ladapo's Department of Health, on Gender Dysphoria in Children and Adolescents. Lapado's an unqualified clown and a political hack with no credentials for the job, skating purely on his allegiance to his gubernatorial fuhrer. An embarrassing laughingstock.

The issued "guidance" by the Dept of Health and the studies used by this board are notably inaccurate and dangerous pseudo-science. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk the politically and religiously motivated academic publications found in the Board's report on gender-affirming care. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Vicki Joseph

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

There is, in fact, overwhelming evidence to support the positive mental health impacts of gender-affirming medical care for trans youth - including in some of the very studies cited by the DOH and Board of Medicine. Prohibiting social transition is clear government intrusion on personal and parental decision making. Numerous studies have found that after social transition, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. When transgender youth are affirmed by people around them, reported rates of depression and suicidality drop significantly. This rule will deny them this life-saving treatment.

I call on this Board to provide truthful information based on science and data as opposed to false statements based on prejudice and political agendas. The truth still matters and the evidence is clear: denying transgender youth the ability to transition is dangerous, abusive, and life-threatening.

Please reject this proposal and keep Florida safe for all.

Sincerely,
Michael Stella

Dear Florida Board of Medicine,

I am writing to you today to demand that you reject the proposed guidance by Surgeon General Ladapo's Department of Health on Gender Dysphoria in Children and Adolescents.

The issued guidance by the Dept of Health and the studies used by this board are notably inaccurate and dangerous. As physicians – it is your responsibility to do no harm. As a government official, it is your responsibility to provide truthful information to create a more informed population. There are numerous peer reviewed articles that easily debunk politically and religiously motivated academic publications found in the Board's report on gender-affirming care. Unfortunately, this guidance and the cherry-picked studies by this board are nothing more than anti-transgender propaganda.

The nation's leading health organizations support gender-affirming care for transgender and gender non-conforming people -- including the American Academy of Pediatrics; the American Medical Association; The American College of Obstetricians and Gynecologists; The American College of Physicians; The American Psychiatric Association; The American Psychological Association; The American Academy of Family Physicians; The Endocrine Society; The Pediatric Endocrine Society; American Nurses Association; American Public Health Association; American Heart Association; National Association of Social Workers; World Medical Association; and The World Professional Association for Transgender Health, among others.

Paul Vazquez, JD
Executive Director
Board of Medicine
Florida Department of Health
597 W 11th St, 1
Panama City, FL, 32401,
Mr. Vazquez:

I want to inform the Board of Medicine that we have communicated with an author of the research article used by the Florida Surgeon General to justify the following guidance:

- **Social gender transition should not be a treatment option for children or adolescents.**

In clear contradiction to the Surgeon General's universalizing guidance, the research study comes to a very different conclusion. In fact, the findings agree with the current Standards of Care issued by the World Professional Association for Transgender Health.

"The present study highlights the importance of considering every case individually, as well as making decisions about a gender transition together with the whole family, as currently suggested by the SoC 7 of the WPATH"

I have copied the text of the message sent to Dr. Katinka Schweizer, Hamburg Medical School. We informed Dr. Schweitzer that the Surgeon General cited her and her colleagues research to justify that directive, even though the research does not support such an action. We invited her to communicate with the Board as you will see in the email message sent from our founder, Dr.

James Lopresti. It is his continuing 20-year guidance in using best practices of care for the needs of the LGBTQ community that informs the day-to-day work of SunServe.

Our agency will be at the meeting in Dania Beach, FL.

Sincerely,

Tony Lima

From: Jim Lopresti

Sent: Sunday, July 31, 2022 7:48 AM

To: katinka.schweizer@medicalschooll-hamburg.de <katinka.schweizer@medicalschooll-hamburg.de>

Subject: Florida Surgeon General directly quotes your research to justify banning social transitioning
Dr. Schweitzer:

I write to you as the founder of the premier social service agency in Florida serving the needs of LGBTQ+ children, youth, and their families. Approximately 70% of the adolescents [about 400 per year] who access our services are gender diverse, i.e. either self-identified transgender, or gender non-binary, or gender questioning. Our program engages the young person and the family to help them understand their child's questions and proceed to help them connect with their child in a way that would engender self-esteem, a secure identity, and an emerging self-confidence. That frequently leads to careful exploration of experiences of social transitioning if, as and when it seems advisable

On Friday, Aug. 5th the Florida Board of Medicine is meeting to hear a request from the state's Surgeon General that the Board of Medicine regulate the practice of medicine to restrict options for care. That includes not only matters of medical interventions, but also matters related to psycho-social care

The Guidelines sent to the Board for their consideration are attached. The guidelines include the following

"Due to the lack of conclusive evidence, and the potential for long-term, irreversible effects, the Department's guidelines are as follows:"

- **"Social gender transition should not be a treatment option for children or adolescents."**

That directive includes a direct hyperlink to your 2020 study in Hamburg as you will see in the attached document

It is our understanding that such an extreme directive goes far beyond the findings of your research. We believe that you should be informed that your research has been specifically referenced to justify that directive, so that you may consider whether to communicate with the Board. Treatment of Gender Dysphoria for Children and Adolescents

April 20, 2022

The Florida Department of Health wants to clarify evidence recently cited on a [fact sheet](#) released by the US Department of Health and Human Services and provide guidance on treating gender dysphoria for children and adolescents.

Systematic reviews on hormonal treatment for young people show a trend of [low-quality evidence](#), small sample sizes, and medium to high risk of bias. A paper published in the [International Review of Psychiatry](#) states that 80% of those seeking clinical care will lose their desire to identify with the non-birth sex. [One review concludes](#) that "hormonal treatments for transgender adolescents can achieve their intended physical effects, but **evidence regarding their psychosocial and cognitive impact is generally lacking.**"

According to the [Merck Manual](#), "gender dysphoria is characterized by a strong, persistent cross-gender identification associated with anxiety, depression, irritability, and often a wish to live as a gender different from the one associated with the sex assigned at birth."

Due to the lack of conclusive evidence, and the potential for long-term, irreversible effects, the Department's guidelines are as follows:

- [Social gender transition](#) should not be a treatment option for children or adolescents.
- Anyone under 18 should not be [prescribed puberty blockers](#) or [hormone therapy](#).
- [Gender reassignment surgery](#) should [not be a treatment option](#) for children or adolescents.
 - Based on the [currently available evidence](#), "encouraging mastectomy, ovariectomy, uterine extirpation, penile disablement, tracheal shave, the prescription of hormones which are out of line with the genetic make-up of the child, or puberty blockers, are all clinical practices which run an **unacceptably high risk of doing harm.**"
- Children and adolescents should be provided social support by peers and family and seek counseling from a licensed provider.

These guidelines do not apply to procedures or treatments for children or adolescents born with a genetically or biochemically verifiable [disorder of sex development](#) (DSD). These disorders include, but are not limited to, 46, XX DSD; 46, XY DSD; sex chromosome DSDs; XX or XY sex reversal; and ovotesticular disorder.

The Department's guidelines are consistent with the federal Centers for Medicare and Medicaid Services [age requirement for surgical and non-surgical treatment](#). These guidelines are also in line with the guidance, reviews, and [recommendations](#) from [Sweden](#), [Finland](#), the [United Kingdom](#), and [France](#).

Parents are encouraged to reach out to their child's health care provider for more information.

Re: Florida State Medical Board Meeting About the Non-binding AHCA Report

After the state's move to ban coverage for all transgender medical treatments for Medicaid became inconclusive (no vote), they struck again. Now, they seek to directly attack doctors via the state medical board for providing gender-affirming care.¹ By doing so, they (again) put that care within the grasp "of ... [state] officials"—not "withdraw[n] ... from the vicissitudes of political controversy[.]" *West Virginia Bd. of Ed. v. Barnette*, 319 U. S. 624, 638 (1943). Like with the Medicaid policy proposal, they use the same report, which has been rebutted by experts. Scientific standing is not the only problem here. I wrote in July that the proposed Medicaid "policy ... 'raise[s] the inevitable inference that the disadvantage imposed is born of animosity toward the class of persons affected.'" Response to Gen. Medicaid Pol. Propos. (quoting *Romer v. Evans*, 517 U.S. 620, 634 (1996)). That quote still holds water; it is not frivolous nor redundant. Indeed, state actions tell you everything you need to know: they only restrict the minority. It is illogical and perverse—it makes no sense to fulminate against transgender treatments while they could be equally applied to non-transgender individuals. And while the state is playing with the law, they are playing with trans people's lives and their liberty. This mistake should not be repeated by the Florida Medical Board. Accordingly, the medical board should not make any new rules or adjustments vis-à-vis transgender healthcare.

Absent any hiatus, the state is moving quickly to push flagrantly undermining rules to restrict (in all ways possible) transgender healthcare. To be clear, this is not the only state action in this area. On April 20, 2022, the Department of Health announced its new (non-binding) guidance opposing everything from "[s]ocial gender transition" to "puberty blockers or hormone therapy[]" for adolescents. Fla. Dept. of H. 2022. *Treatment of Gender Dysphoria for Children & Adolescents*. *Contra* Human Rights Campaign Rebuttal 2022, 1 (the guidance "dangerously cherry-pick[s] select research to assert their claims" while simultaneously "ignor[ing] the vast majority of the literature" supporting such treatments). And in June, the state's Health Care Administrative Agency sent a 46-letter claiming that "gender affirming" treatments are not safe or effective in the

¹ The meeting is set for August 5, 2022. See Florida Board of Medicine. n.d. "Meeting Information." Florida - Board of Medicine. <https://flboardofmedicine.gov/meeting-information/>

absence of “available medical literature[.]” DeSantis, Ron, and Simone Marsteller. 2022. *Fla. Medicaid-Gen. Acpted. Pro. Med. Std. Determ. on the Treatment of Gender Dysphoria* (hereinafter “AHCA Report”); see Florida Administrative Register 2022, pg. 2462 (a proposed medicaid rule barring Medicaid coverage for all medical treatments corresponding to “Gender Dysphoria[.]”) (unpub. rule).² Although the meeting has already finished (July 8), there still has not been a final decision. In its most recent move—and not even a month later—it seeks to have a new meeting with the medical board, consistent with the request by the surgeon general. This is particularly chilling given the statutory authority the Florida Medical Board possesses, and now it’s not just Medicaid—it’s every trans person at risk. Today, the medical board is at the center of the stage in the middle of a scientific and constitutional calamity.

Under Florida law, the Florida Medical Board has substantial power, including “disciplinary action” against physicians. Fla. Stat. § 458.331. Below are a few reasons for disciplinary action, clearly applying to gender-affirming treatments in the state’s dogma of them being, *inter alia*, “experimental” and not safe. AHCA Report, 38.

(q) it shall be legally presumed that prescribing, dispensing, administering, mixing, or otherwise preparing legend drugs ... *inappropriately* or in excessive or inappropriate quantities *is not in the best interest of the patient* and is not in the course of the physician’s professional practice, without regard to his or her intent

(ee) prescribing, ordering, dispensing, administering, supplying, selling, or giving growth hormones, testosterone or its analogs ...

Id., at 458.331 (1) (q)(ee) (emphasis added).³

If a physician violates those statutes above, the punishment could be, for example, “[r]estriction of practice or license,” “[s]uspension or permanent revocation of a license[.]” or even “an

² <https://www.flrules.org/notice/Proposedinfo.asp?id=25979915>

³ Surgeries for transgender individuals (more modest in usage than hormones or hormone blockers) may be also found within chapter 458. See Fla. Stat. § 458.328 (1) (h) (“...The board shall impose a fine of \$5,000 per day on a physician who performs a procedure or surgery in an office *that is not registered with the department*”) (emphasis added). Since the state is seeking to outlaw all transgender treatments, see *supra* ¶2, it is unlikely that it would be registered with the department. Even if we could surpass all of these statutes, “[t]he board has authority to adopt rules pursuant to ss. 120.536(1) and 120.54 to implement the provisions of this chapter conferring duties upon it.” Fla. Stat. § 458.309 (1)

administrative fine[.]” Fla. Stat. § 456.072 (2) (b)(c)(d).⁴ The effect on the physicians is self-evident: many will be injured beyond just economic impairment. So too is the effect on transgender patients receiving (and needing) care. When treatment is diminished or stopped, the increase in the rates of suicide, suffering, and depression is not a mere question—it is a statement.⁵

The state’s actions today should not survive in the United States. When looking at the state’s actions relative to the AHCA Report, there’s no sheer concern about the “irreversible physical changes and side effects that can affect long-term health” related to treatments for gender dysphoria. 2. Nor could they: to this day, they have consistently failed to equally apply it to cisgender individuals, even when many treatments (as applied to cisgenders) are just as dangerous. *Compare* Fla. Dept. of Health guidance (opposing specifically gender-affirming care) *and* Florida Administrative Register 2022, 2462 (similar) *with* AHCA Report, 2–38 (similar). Indeed, “[i]f there is need to have [a] physician prescribe (and a pharmacist dispense) contraceptives, that need is as great for unmarried persons as for married persons.” *Eisenstadt v. Baird*, 405 U.S. 438, 450 (1972). Or, said another way, “[i]f there is a need to protect transgender youth from the purported risks of the banned treatments (there is not), then that need is as great for cisgender and/or intersex youth who receive the same medical treatments.” *Walker v. Marshall*, 2:22-cv-00167 (N.D. Ala. 2022), ECF 10, pg. 38 (hereinafter “*Walker*”). I will name a few examples. The state is fine with “chest surgery for [the] treatment of gynecomastia” as well as “chest-feminizing surgery” for non-transgenders. *Id.*, at 40. Similarly, gender dysphoria treatments, such as puberty blockers, “are also used to delay puberty in children with central precocious puberty[.]” *Id.*, at 39. The state says nothing about that. The same issue applies to hormone therapy: as for “nontransgender girls with primary ovarian insufficiency,” “hypogonadism,” and “Turner’s Syndrome,” for example, the state does not say anything about hormone treatment for those either. *Id.*, at 39–40. “[P]olycystic ovarian syndrome” may require testosterone blockers. *Id.*, at 40. Yet, the state bats no eye on blockers for that (nor any of the examples above)—even though apparently *all* medical treatments for gender dysphoria can cause “side effects that can affect long-term health[.]” AHCA Report, 2.

⁴ The medical board’s mission statement is far more candid: “The Florida Board of Medicine ... will license, monitor, discipline, educate, and when appropriate, rehabilitate physicians and other practitioners[.]” Florida Board of Medicine. n.d. Florida Board of Medicine - Healthcare Practitioner Licensing and Regulation. Accessed July 30, 2022. <https://flboardofmedicine.gov/>

⁵ See, e.g., Human Rights Campaign Rebuttal, *supra*, at 4–5 (listing six studies that demonstrate this); Olson, Kristina R. 2016. “Mental Health of Transgender Children Who Are Supported in Their Identities.” *Pediatrics* 137, no. 3 (March): 2015–3223 (stating that “[s]ocially transitioned transgender children who are supported in their gender identity have developmentally normative levels of depression and only minimal elevations in anxiety”—albeit better than not getting treatment or being “supported.”); *infra* ¶7 (*Amicus Curiae* brief)

There's no legitimate concern by the state about the quality of evidence either—and it would be almost impossible for the state to carry their burden of making an “exceedingly persuasive” justification. *United States v. Virginia*, 518 U.S. 515, 524 (1996). Beyond the purported concern about “side effects,” the report also claims there is “weak evidence supporting the use of puberty suppression, cross-sex hormones, and surgical procedures[.]” AHCA Report, 3. Thus, such treatments “are experimental and investigational.” *Id.* The public record demonstrates, however, that the state “tethers [transgender individuals] to sex stereotypes which, as a matter of medical necessity, they seek to reject.” *Kadel v. Folwell*, 446 F. Supp. 3d 1, 14 (M.D.N.C. 2020). As a threshold matter, “the State cannot carry its burden to justify the[ir] [state actions] based on purported concerns about the quality of the evidence concerning the treatment for two reasons: (1) the consensus within the mainstream medical community is that the treatment is effective, and (2) even if there were limitations in the data supporting efficacy of the care, that would not explain why only this medical care—when provided to transgender [individuals]—is singled out for a uniquely high standard of evidence.” *Walker*, 44. All mainstream medical organizations, such as “the American Medical Association, the American Academy of Pediatrics, and the Endocrine Society,” have deduced and affirmed that gender-affirming treatment “is safe and effective.” *Id.* Even experts from Yale are on the same train: “If Florida[] ... applied the June 2 Report’s [low-quality concern] approach to all medical procedures equally, it would have to deny coverage for widely-used medications like statins (cardioprotective cholesterol-lowering drugs taken by millions of older Americans) and common medical procedures like mammograms and routine surgeries.”⁶ McNamara, Meredith et al. 2022. *A Critical Review of the June 2022 Florida Medicaid Report on the Medical Treatment of Gender Dysphoria*, pg. 3 (hereinafter “AHCA Review Report”); *see id.*, at 16; *see also id.*, at 5 (gender-affirming care “has been vetted and approved by international bodies of experts based on the scientific evidence.”) The state has failed to do so and subjects transgender individuals to an unusual standard of evidence vis-à-vis their non-transgender counterparts. Therefore, there are no legitimate state interests.

⁶ To continue with the “low quality” concern, the state mentions it many times—even at the start. *See, e.g.*, AHCA Report, 2 (“Studies presenting the benefits to mental health, including those claiming that the services prevent suicide, are either low or very low quality”). When readers surpass this deceptive language, however, they see that under the GRADE rating standards, even “low quality” studies “support a strong clinical treatment recommendation.” AHCA Review Report, 14; *see* Balshem, Howard, et al. 2011. “GRADE guidelines: 3. Rating the quality of evidence.” *J Clin. Epidemiol.* 64, no. 4 (Jan): 401-6. Randomized control trials would be considered “high quality” (AHCA Review Report, 13) while, conversely, observational proof, such as “studies [are] technically ranked as ‘low quality,’” *id.*, at 16 (citing Stone, Neil J. 2014. “2013 ACC/AHA Guideline on the Treatment of Blood Cholesterol to Reduce Atherosclerotic Cardiovascular Risk in Adults.” *Circulation* 129, no. 25 (June): S1-S45.) As stated above, medications, including statins and “common medical procedures like mammograms and routine surgeries,” rely on observational studies. AHCA Review Report, 3, 16 & n53. Thus, those studies are “low quality”—yet we don’t see the state sending a 46-page letter opposing any of those treatments, nor the other actions it has taken over the past couple of months. Either the state is hypocritical or it is discriminatory. It seems to be one or the other.

The state's dependence on faulty scientific findings does not rescue their claims. The state has sanctioned a reputedly "scientific report that so blatantly violates the basic tenets of scientific inquiry." *Id.*, at 2. It is "a document crafted to serve a political agenda." *Id.* In form and in effect, it endangers "adolescents with gender dysphoria access to medical interventions that alleviate suffering" by creating an unscientific report that spreads like a wildfire. Brief for the Am. Acad. Pediatr. as *Amicus Curiae*, p. 19, *Eknes-Tucker v. Ivey*, 2:22-cv-184-LCB-SRW (M.D. Ala. 2022). And when "research shows that adolescents with gender dysphoria who receive puberty blockers and/or hormone therapy experience less depression, anxiety, and suicidal ideation," the state merely ducks. *Id.*⁷ Hereunder, I will go over the major findings in the AHCA Review Report.

First, five attachments (by "experts") to the AHCA Report disregard medical guidelines for the treatment of gender dysphoria and instead "recommend against the use of such interventions to treat what is categorized as a mental health disorder[.]" 2. *Contra* Brief for the Am. Acad. Pediatr. as *Amicus Curiae*, 7–14 (20 major medical organizations listing the guidelines and affirming their effectiveness). However, the attachments could not be further afield. Not only do they go against the 20 major organizations listed above, but they also have underlying questions of bias and expertise. See AHCA Review Report, 6. Most notably, *none* are "peer-reviewed or published," a vital criterion by which scientific pieces may be publicly scrutinized. Nor do any of "the attachments provide a statement of funding and conflicts of interest." *Id.*, at 7. And *all* raise "flags" of bias. *Id.*, at 6. But first, turn to attachment E, which is by Quentin van Meter. He is the president of the American College of Pediatricians (ACP), a "political" organization "that opposes same-sex marriage, supports mental health providers practicing conversion therapy, and describes childhood gender dysphoria as 'confusion.'" *Id.*, at 7 (citations omitted); see *id.*, at n15, n16, n17. Meter has also been disqualified by a judge for being incapable of giving expert testimony about "the legal question of whether an adolescent transgender child should be administered puberty blockers and whether affirmation of an incongruent gender in a child is harmful or not[.]"⁸ Similarly, James Cantor (attachment D) in the report fares no better. There, "the Court gave

⁷ While "Cantor specifically notes that actual suicides are highly unlikely among gender dysphoric individuals, particularly trans-males[.]" the wall of medical experts (20 to be exact) seem to say otherwise. AHCA Report, 28. To be clear, "*more than one in three* transgender adolescents reported having attempted suicide in the preceding 12 months." Brief for the Am. Acad. Pediatr. as *Amicus Curiae*, 6 (emphasis added); see *id.*, at n15. And even if Cantor and the state are true, they miss the point: Suicide attempts are a risk factor for completing suicide. Bostwick, Michael. 2016. "Suicide Attempt as a Risk Factor for Completed Suicide: Even More Lethal Than We Knew." *Am J Psychiatry* 173, no. 11 (Nov): 1094–1100.

⁸ Caruso, Stephen. 2020. "A Texas judge ruled this doctor was not an expert. A Pennsylvania Republican invited him to testify on trans health care." *Pennsylvania Capital-Star*, September 15, 2020. <https://www.penncapital-star.com/government-politics/a-texas-judge-ruled-this-doctor-was-not-an-expert-a-pennsylvania-republican-invited-him-to-testify-on-trans-health-care/>

[Cantor’s] testimony little weight because he admitted, *inter alia*, to having no clinical experience in treating gender dysphoria in minors and no experience monitoring patients receiving drug treatments for gender dysphoria.” *Id.*, at 8 (quoting Opinion and Order, *Eknes-Tucker v. Marshall*, 2:22-CV-184-LCB-SRW (M.D. Ala. 2022)). He could have been on the case because his “appearance in that case seems to have been funded by the Alliance Defending Freedom (‘ADF’), a religious and political organization that opposes legal protections for transgender people and same-sex marriage and defends the criminalization of sexual activity between partners of the same sex.” *Id.* (citations omitted); *see id.*, at n22, n23, n24. As for Attachment C (Romina Brignardello-Petersen & Wojtek Wiercioch), issues run the gamut, including inexpertise. The first problem is quite simple—Brignardello-Petersen’s “only clinical experience appears to be in dentistry.” *Id.*, at 10.⁹ Apparently, we live in an alternate universe (“Florida”) where “dentistry” in lieu of endocrinology and mental health as applied to transgender care somehow passes as “expert.” Wiercioch, the other author, is a “postdoctoral fellow” who has “no prior research or clinical experience in” transgender care. *Id.* Indeed, the foregoing issues go against relevant guidelines; they require “expertise in the pertinent clinical content areas.”¹⁰ The study that the authors provide (Attachment C) is not peer-reviewed, nor are any of the studies in the attachments for that matter. As stated above, peer review is very important—it is not “merely window-dressing; they reflect bedrock commitments of the scientific method.” *Id.*, at 11. By failing to undertake basic peer-review, the authors (and most of the authors from the attachments) truncated ordinary procedures of scientific review. Furthermore, the authors include in their study a website called SEGM.org. *See id.* That citation crumbles upon examination; “the group’s website posts are not peer-reviewed or published, and its content is assembled by a small group of activists with few or no expert credentials[.]” *Id.* (quoting Boulware 2022).¹¹ Most notably, Brignardello-Petersen is connected to the group, having “conducted research” for them. *Id.*, at 8. The study provided by the authors suffers even more losses by further review. *See id.*, at 11–14 (evaluating the authors’ usage of certain rating systems and the absence of sufficient literature). Now, we turn to Patrick Lappert (Attachment F). Like Meter and Cantor, “evidence ... calls Lappert’s bias and reliability into serious question.” Memorandum Opinion and Order, *Kadel v. Folwell*, 1:19CV272 (M.D.N.C 2022), pg.

⁹ Brignardello-Petersen’s profile also states that she is a “Assistant Professor[of] Health Research Methods, Evidence, and Impact[.]” Brignardello, Romina. n.d. “Romina Brignardello Assistant Professor, Health Research Methods, Evidence, and Impact.” McMaster Experts. Accessed July 30, 2022. <https://experts.mcmaster.ca/display/brignarr>. But, as of July 30, 2022, her only contributions are in, *inter alia*, virology and epidemiology—both, again, inexpert for transgender care. *See id.*

¹⁰ Institute of Medicine, Board on Health Care Services, and Committee on Standards for Systematic Reviews of Comparative Effectiveness Research. 2011. *Finding What Works in Health Care: Standards for Systematic Reviews*. Edited by Alfred Berg, et al. N.p.: National Academies Press.

¹¹ Boulware, Susan D. 2022. “Biased Science: The Texas and Alabama Measures Criminalizing Medical Treatment for Transgender Children and Adolescents Rely on Inaccurate and Misleading Scientific Claims.”

27. The court order also observed that “Lappert has worked closely with ADF” and had been to conferences that “asked whether they would be willing to participate as expert witnesses.” *id.* (quoting ECF No. 209-2 at 90:13–91:13).¹² The issues listed above are not mere hypothetical concerns; they are serious barriers posed, such as conflicts of interest and biases. Worse, the authors as listed in the attachments never address or mention them—or list them as every “scientific” report is supposed to do. *See* AHCA Review Report, 7 & n13.

Second, the AHCA Report attempts to dismiss various studies. However, by doing so, they trip over their own feet in the process—another fatal mistake. Below is a non-exhaustive list of those failed attempts. To begin, turn to page 15 of the report. There, the Costa study “relies heavily on self-assessments” so apparently the results “are likely biased and invalid.” AHCA Report, 15. The report also claims that the “short-term period of the study” warrants condemnation. *Id.* These points lack merit for two reasons. First, the “self-assessments” are from a test called the Children’s Global Assessment Scale. It is well-documented, well-regarded, and accepted, and is relied upon for psychological research. AHCA Review Report, 17. The scale is thus “carefully constructed and psychometrically validated.” *Id.* Lastly, one cannot solely criticize a medical study—that is, in this study, about the efficacy of puberty blockers—without looking into the vast array of other studies because “[s]cientific knowledge is ... cumulative.” *Id.*, at 18. The AHCA Report blindly attacks “a single study and fails to acknowledge that the weight of the literature as a whole strongly supports the same results that Costa et al. report.” *Id.*, at 17–18 (emphasis deleted). Continuing on to the other studies, the AHCA Report on the Chen article deludes the reader by misrepresenting the article’s contents. *See* AHCA Report 15–16 (stating, by use of the article, that the “the effects of pubertal suppression warrant further study”).¹³ *But see* AHCA Review Report, 18 (The article “is not a substantive study of the effects of puberty blockers”). The article is “a consensus parameter[]”—a type of “structured methodology” that enables experts to create a “research agenda for future studies.” *Id.* Thus, those types of opportunities are simply to pick out ways to research subjects and techniques—not to be cited in such a narrow manner by the state. The review report says it perfectly: the article’s “statements are not indictments of puberty blockers—they are conventional acknowledgments of the value of further study that drives scientific inquiry and innovation.” *Id.* The AHCA Report separately cites a case in which they say “puberty suppression causes side effects, some of which have the potential to be permanent.” 16. Interestingly, the report says that these “indicate that Gn-RH is safe” and that the majority of the “side effects associated

¹² He has also stated that physicians “should be ‘criminally prosecute[d]’ for giving gender-affirming care. *Kadel*, at 27 (quoting ECF No. 209-2 at 52:4-18, 54:7–55:2, 57:8-15, 61:16–64:20).

¹³ (quoting Chen, Diane. 2020. “Consensus Parameter: Research Methodologies to Evaluate Neurodevelopmental Effects of Pubertal Suppression in Transgender Youth.” *Transgender Health* 5 (4): 246-257) (hereinafter “Chen et al”)

with Gn-RH are mild[.]” *Id.* One of the side effects the report digs into is “osteonecrosis.” *Id.* However, even it states that this side effect “is rare[.]” *Id.* From the state’s perspective, minor or moderate side effects (in its view, more solid than others) cause burdens—burdens that could be circumvented in toto if we strip away the right (and only the right) to gender-affirming care even though every medical organization opposes it. This is a strange way of looking at rights, and there is a good reason courts have not adopted this thinking. Further, it’s clear that gender-affirming care is not atypical for having specific side effects, so it makes no sense to only try to restrict and demean that care to a sole minority group. *See Walker*, 41–42 (rejecting the state’s concern of “risks” to justify banning gender-affirming care because there was nothing special tailored to those treatments).¹⁴

Third, the state again tries to negate the applicability of gender-affirming treatments to other treatments. Now, they try to assert that the “FDA did not approve [puberty blockers and hormone therapy] for treating gender dysphoria” and, as a result, it is classified as “off-label[.]” AHCA Report, 8. But the fact is, many drugs are used “off-label.” *See, e.g.*, AHCA Review Report, 20–21 (gabapentin is used off-label “for neuropathic or mixed pain”); (ketamine and fentanyl is used “off-label for pain relief”); (“[c]affeine is used off-label to treat apnea” including “phenobarbital is used off-label to treat neonatal seizures” in the NICU); (“pantoprazole is a proton pump inhibitor” and is also “used off-label in neonates with gastroesophageal reflux disease”); (“[o]ndansetron (Zofran) is used off-label for nausea and vomiting to prevent fluid loss”). As mentioned above, the state subjects transgender individuals to different standards of care in relation to their non-transgender counterparts. *See supra* ¶6.

Fourth, the AHCA Report claims that “the *majority* of young adolescents who exhibit signs of gender dysphoria eventually desist and conform to their natal sex[.]” 14 (emphasis added). Similar to Texas Attorney General Ken Paxton’s interpretations, the report uses the term “children” *Id.* “Actual scientific evidence on the course of gender dysphoria emphasizes the importance of distinguishing between prepubertal children and adolescents.”¹⁵ When the AHCA Report uses that

¹⁴ Also troubling, the letter cites studies that contradict its previous assertions, “in what looks like a circular firing squad.” *Equality Florida v. DeSantis*, 4:22-cv-0134-AW-MJ (N.D. Fla. 2022), ECF 81, pp. 13–14. *Compare* AHCA Report, 17 (“Prescribers ... de-emphasize that these drugs cause permanent physical changes and side effects that can lead to premature death”) with AHCA Report, 17 (the risk of long term effects are small, “most side effects associated ... are mild,” and “the authors indicate that Gn-RH is safe”) and Chen et al, 249 (“[s]uppressing puberty may reduce dysphoria and diminish risks for poor mental health in this population, thereby exerting *neuroprotective* effects.”) (emphasis added).

¹⁵ Boulware, Susan D. 2022. “Biased Science: The Texas and Alabama Measures Criminalizing Medical Treatment for Transgender Children and Adolescents Rely on Inaccurate and Misleading Scientific Claims,” p. 18 (hereinafter “Texas and Alabama Report”).

terminology, it gives a false sense “that most or all children *and* teens diagnosed with dysphoria will cease identifying with the gender not assigned at birth.” Texas and Alabama Report, 18. Of course, that is wrong. Rather, studies paint a different picture: “[A]dolescents who are diagnosed with gender dysphoria will persist in their gender identity[.]” *Id.*; *see id.*, n63, n64, n65. Although the resolving rate *is* higher in prepubescent children suffering from gender dysphoria, “standard medical protocols do not treat prepubertal children with drug therapy or ... surgery.” *Id.*, at 18; *see* Brief for the Am. Acad. Pediatr. as *Amicus Curiae*, 9. To defend its position, the state generally cites a study by Littman, but that goes awry.¹⁶ In the study, Littman “defines detransition as ‘discontinuing medications, having surgery to reverse the effects of transition, or both.’” AHCA Review Report, 22. This is obviously confusing because there are many reasons why people might want to stop medications. Applying her logic, her definition of a transgender individual could continue to be socially transitioned but be counted as a “detransition[er].” *Id.* Conversely, the state disregards important studies showing, *inter alia*, low regret and a detransition rate (findings were around $\leq 1\%$).¹⁷

Fifth (and lastly), the AHCA Report’s groundless statements about gender dysphoria being caused by “social and peer contagion.” 12. This so-called “peer contagion” in gender dysphoria may be caused by “rapid onset gender dysphoria[.]” *Id.* What is the pathology, or even the citations to back up this extraordinary claim? The former is not supported by any studies while the latter, is *her* study only. “Neither the American Psychiatric Association nor any other reputable professional organization” has actually validated ROGD. Texas and Alabama Report, 21. It could be because the study itself did not receive adequate feedback for it to be sufficient in the eyes of major organizations. The Texas and Alabama Report said

WPATH, among other authorities, has taken a skeptical view of Littman’s claim, and the study has been criticized for serious methodological errors, including the use of parent reports instead of clinical data and the recruitment of its sample of parents from anti-transgender websites. The journal of publication required an extensive correction of

¹⁶ Littman, Lisa. 2021. “Individuals Treated for Gender Dysphoria with Medical and/or Surgical Transition Who Subsequently Detransitioned: A Survey of 100 Detransitioners.” *Arch Sex Behav.* 50, no. 8 (Nov): 3353–69.

¹⁷ Bustos, Valeria et al P. 2021. “Regret after Gender-affirmation Surgery: A Systematic Review and Meta-analysis of Prevalence.” *Plast Reconstr Surg Glob Open.* 9, no. 3 (Mar); Danker, Sara et al. 2018. “Abstract: A Survey Study of Surgeons’ Experience with Regret and/or Reversal of Gender-Confirmation Surgeries.” *Plastic and Reconstructive Surgery* 6, no. 9S (Sept); Wiepjes, Chantal M., et al. 2018. “The Amsterdam Cohort of Gender Dysphoria Study (1972-2015): Trends in Prevalence, Treatment, and Regrets.” *J Sex Med.* 15, no. 4 (Apr): 582–90; *see also* Smith, Yolanda L. 2005. “Sex reassignment: outcomes and predictors of treatment for adolescent and adult transsexuals.” *Psychol Med.* 35, no. 1 (Jan): 89-99; Olson, Kristina R. 2022. “Gender Identity 5 Years After Social Transition.” *Pediatrics* 150, no. 2 (Aug).

the original Littman article because of its misstatements. Such a correction in reputable, peer reviewed academic journals is taken only when a panel of experts, in retrospect, came to recognize the methodological flaws of the original study and concluded that it would be unscientific to allow the originally published findings to stand.

Id., at 20–21.

Moreover, studies have rejected these notions of ROGD. When 173 youth arrived at Canadian gender clinics in 2022, they “found no evidence of rapid-onset dysphoria or social contagion” even when considering Littman’s hypothesis. AHCA Review Report, 24. And when another 173 youths were studied, they were also stumped with the same result: “no such correlations[]” materialized. *Id.*¹⁸ Data from the Williams Institute also supports those studies. The data simply “do[es] not show a massive wave of transgender identity even among teens.” *Id.* As of 2022, a study shows that 0.5% of adults and 1.4% of youth aged 13-17 identify as transgender (equivalent to 300,000 young individuals). *Id.*¹⁹ Collectively, the foregoing studies and resources join together to demonstrate the opposite of what the AHCA Report claims: there is no evidence of “rapid onset gender dysphoria” nor “social and peer contagion.” 12. Instead, it shows something else hidden under the cracked surface—stereotypes that transgender individuals “do not know[] their own gender identity and readily change their gender identity based on peer influence and social media.” AHCA Review Report, 24.

“[W]e are beyond the day when an [individual or] employer could evaluate [others] by assuming or insisting that they matched the stereotype associated with their group[.]” *Price Waterhouse v. Hopkins*, 490 U.S. 228, 251 (1989) (plurality op.). The state collapses under its own feet. “Nor is there an adequate remedy for preventable ‘life-long diminished well-being and life-functioning.’” *Whitaker v. Kenosha Unified Sch. Dist. No. 1 Bd. of Educ.*, 858 F.3d 1034, 1042 (7th Cir. 2017). When the state could eliminate discrimination, it chooses not to. The detrimental and irreparable effect is on the minority whom they have a compelling interest in protecting. *See Bd. of Dirs. of Rotary Int. v. Rotary Club of Duarte*, 481 U.S. 537, 549 (1987) (declaring the “State’s compelling interest in eliminating discrimination”); *Heart of Atlanta Motel, Inc. v. United States*, 379 U.S. 241, 252–53 (1964) (observing the systemic effects of discrimination); *id.*, at 274 (similar) (Black, J. concurring).

Tallahassee, FL 32399-3253

**Re: Human Rights Campaign Comments on the Surgeon General's July 2,
2022 Letter concerning gender affirming medical care**

Dear Dr. Diamond and Members of the Florida Board of Medicine:

On behalf of the Human Rights Campaign's more than three million members and supporters nationwide, we submit this comment in response to the letter from the Surgeon General of Florida recommending the creation of a standard of care that would ban or significantly curtail the ability of medical practitioners to provide standard and medically necessary gender affirming health care to minors.¹ As the nation's largest organization working on behalf of lesbian, gay, bisexual, transgender, and queer people, we are deeply troubled by this letter in which the Surgeon General disregards scientifically based standards set by numerous medical professional organizations including the American Academy of Pediatrics, the American Medical Association, and the Endocrine Society.² The creation of a standard of care in line with the Surgeon General's recommendations would cause confusion and chaos among medical professionals in the State as they attempt to comply with standards that contravene the majority scientific consensus. It would also potentially force many vulnerable young patients to either delay the start of treatment or suspend medically necessary care during the course of treatment. We implore the Board to disregard the unfounded recommendation by the Surgeon General of Florida or to ensure that any creation of a standard of care includes gender affirming healthcare as a viable treatment for medical practitioners to recommend and dispense in consultation with their patients and their families.

² *Id.*

Denying access to safe, affirming, and age-appropriate medical care such as gender-affirming hormones or puberty-delaying medication is dangerous and can be life-threatening. There is a clear correlation between youth receiving gender-affirming care and a decrease in anxiety, depression, self harm, and suicidal ideation. A blanket denial of care by preventing medical practitioners from engaging in the practice would increase rates of adverse mental health outcomes among transgender young adults.³

Gender-affirming care for transgender youth and adolescents largely involves social transitioning – whereby a person adopts a name, pronouns, and gender expressions that are consistent with their gender identity. Additionally, youth are often supported by a host of medical practitioners in their social transition through therapy and later consultation regarding medical transition if the patient so desires it.⁴ Numerous studies have found that, after social transitioning, transgender youth report similar mental health levels to the general youth population, eliminating mental health disparities typically seen. “Transitioning socially should not only be viewed as a form of treatment, but can be understood as a possibility for children to explore their own individual developmental pathways.”⁵ It is clear that these non-medical elements of transitioning help increase positive health outcomes. As stated, healthcare supporting social transitioning is sometimes only one part of a transgender individual’s healthcare plan to live fully as their whole selves.

For some people, medical transition is necessary. Gender-affirming medical care encompasses hormone therapy, puberty blockers or other medical procedures. And to be done properly and safely, there must be close consultation with medical practitioners. According to Williams Institute, there are approximately 16,200 transgender youth (ages 13-17) throughout the state of Florida.⁶ A standard banning or severely restricting gender affirming care would outright prevent these individuals from receiving care for gender affirming procedures within the State of Florida. For example, many transgender individuals report having to leave their home state (Florida included) in order to receive gender affirming care as the closest provider of such care resides outside of state lines.⁷ A new standard of care banning or severely restricting gender affirming care would push transgender youth across the State to either: 1) leave to a different, more welcoming state, to receive gender affirming care as there would remain no practitioner within the state that could provide them with said care, 2) suffer the mental health consequences as described above due to an inability to transition (due to financial, employment, familial, or other

³ “Use of GAHT [gender affirming health treatments] was associated with lower odds of recent depression and seriously considering suicide compared to those who wanted GAHT but did not receive it.” Amy E. Green, *Association of Gender-Affirming Hormone Therapy With Depression, Thoughts of Suicide, and Attempted Suicide Among Transgender and Nonbinary Youth*, Journal of Adolescent Health, (2021) <https://doi.org/10.1016/j.jadohealth.2021.10.036>.

restriction preventing them from crossing state lines), or 3) leave the state permanently with (or potentially without) their families to a state that is more welcoming and able to provide them with the standard and medically necessary treatments they need. Additionally, a new standard of care may lead to either the de-licensing of medical professionals throughout the state for having provided such care or the moving of medical professionals throughout the state because of a desire to provide such care. This could leave the State with a shortage of licensed medical professionals.

A new standard to prevent medical professionals from providing gender affirming care not only restricts access to necessary medical care, it also prevents parents from making decisions in the best interest of their children. This new standard would also prevent doctors from making medically sound determinations based on widely accepted and vetted standards of care and from working with their patients on how to provide the best care possible tailored to the individual for fear of losing their job and their license to practice medicine in the State. In a study of over 160 medical doctors, “[o]verall, 85.7 percent of clinicians were willing to provide routine care to transgender patients.”⁸ Although this number is encouraging, “willingness is not necessarily equivalent to competence or the ability to provide high-quality, sensitive care.”⁹ It is imperative to ensure that medical practitioners are able to provide gender affirming care not only for the benefit of youth throughout the State, but also to ensure that those same practitioners are keeping up to date with the latest in treatments made available by the scientific community.

A new standard also ignores the fact that the medical establishment has already spoken on this matter. The American Medical Association, representing millions of doctors across the United States, points out that the majority of medical associations throughout the nation include gender affirming care as part of their own treatment standards noting that:

The AMA opposes any discrimination based on an individual’s sex, sexual orientation or gender identity, opposes the denial of health insurance on the basis of sexual orientation or gender identity, and supports public and private health insurance coverage for treatment of gender dysphoria as recommended by the patient’s physician....In addition, other medical associations, including the American Academy of Family Physicians, American College of Obstetricians and Gynecologists and American Psychiatric Association have stated that medically necessary transition-related care should be covered by insurance.¹⁰

Numerous fallacies underlie the Surgeon General’s letter recommending a new standard of care. The theory of rapid onset gender dysphoria has been debunked throughout the scientific and medical literature, and met with significant and substantial methodological critiques.¹¹ In fact, determining

¹¹ Arjee Javellana Restar, *Methodological Critique of Littman’s (2018) Parental-Respondents Accounts of “Rapid-Onset Gender Dysphoria*, *National Library of Medicine* (Apr. 22, 2019), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7012957/>; see also Greta R. Bauer, Margaret L. Lawson, and Daniel

treatment approaches (or, in this case, lack thereof) based on so-called rapid onset gender dysphoria would not meet the generally accepted professional medical standards determination, due to the lack of empirical support for this theory. This would make a new standard of care an outlier nationally. Indeed, in 2021, the American Psychological Association, the American Psychiatric Association, the Florida Psychological Association, and over 120 other medical associations issued a position statement calling for “eliminating the use of Rapid-Onset Gender Dysphoria and similar concepts for clinical and diagnostic application given the lack of rigorous empirical support for its existence and its likelihood of contributing to harm and mental health burden.”¹²

In addition, the overwhelming evidence supports the ability of medical professionals to provide gender affirming care due to the positive mental health impacts of treatments such as puberty blockers on transgender youth.¹³ For example, a systematic review of 13 studies found that receipt of puberty blockers had numerous positive psychosocial impacts, including “significant improvements in multiple psychological measures, including global functioning, depression, and overall behavioral and/or emotional problems.”¹⁴ Puberty blockers are both safe and fully reversible.¹⁵ According to the Endocrine Society, “Pubertal suppression is fully reversible, enabling full pubertal development in the natal gender, after cessation of treatment, if appropriate. The experience of full endogenous puberty is an undesirable condition for the GD [gender dysphoric]/gender-incongruent individual and may seriously interfere with healthy psychological functioning and well-being. Treating GD/ gender-incongruent adolescents entering puberty with GnRH analogs has been shown to improve psychological functioning in several domains.”¹⁶

‘Off label’ use does not mean experimental, illegal, or unsafe. Puberty blockers have been used safely and effectively with cisgender youth for decades under FDA approval, with minimal side effects.¹⁷ They have been used safely and effectively with transgender youth since the 1990s.¹⁸ As with puberty blockers, there is substantial evidence demonstrating positive mental health benefits associated with gender-affirming hormones, including lower rates of depression, anxiety, and suicidality.¹⁹ Any form of gender affirming care received by transgender youth is administered in consultation with medical and mental health professionals and their parents. The vast majority of transgender youth and adults remain consistent in their transgender identity.²⁰ Doctors must have the ability to choose safe and effective medical treatments for actual patients with actual health needs.

HRC reiterates our strong opposition to the Surgeon General of Florida’s letter recommending the creation of a standard of care banning or severely restricting the use of gender affirming care by medical practitioners. We urge the Board of Medicine to recognize the positive health benefits that gender-affirming care has on transgender individuals and the necessity of medical practitioners in that care. It is important to recognize that denial of transition-related care is damaging and has effects beyond access to gender-affirming medical procedures and medication, including resulting in a chilling effect on support for social transition and culturally sensitive healthcare for a person’s full range of medical needs. Medical professionals must be able to care for their patients using the full swath of care paths possible, not just those deemed politically acceptable by the government.

To Whom It May Concern:

I have recently been given to understand that there is a proposal before the board for emphasizing conversion therapy rather than current standard care for transgender individuals. I am writing to implore you to reject standards of care for transgender people that emphasize conversion therapy. This "therapy" has long since been debunked as not only ineffective but harmful. The hippocratic oath requires a vow to "first, do no harm" . To replace transgender care with conversion therapy would in fact be harmful for transgender individuals of all ages. No matter how you or, more importantly, a political base feel about their existence, they have a right to exist as they are. No individual regardless of your opinion of their identity should have to be diminished or told that their existence is not real or valid-or that a political party or a single religion knows their identity better than they and their medical providers do. The consequences for the mental health and suicidal rates amongst teenagers alone could be disastrous. Here a couple of recent references:
